 $L_{j}[\lambda] = \frac{1}{dt}(\frac{2}{2}, \lambda) - \frac{2}{2q}, \lambda = 0 \longrightarrow \text{Eucenion de novimients}$

Mabienes visto que si teníanes una venable ciclica quit. $\frac{\partial L}{\partial g_{x}} = 0$, at $\frac{\partial L}{\partial g_{x}} = P_{x}$ es una Confided answada.

¿Quí pasa si to es cíclien?

Formalmete, pademos recender un resultado

la Fisicamente significa que terenos un sistema extracionorio.

del cótalo de variacións.

(> =: I(y(x))= \int f(y,y';x) dx + & I:= 0 => \frac{1}{2} \left(\frac{3}{2}y' \, \right) - \frac{3}{2y} \, \right) = 0

as: $\frac{\partial f}{\partial x} = 0$ and $\frac{\partial}{\partial x} \left(f - \frac{\partial f}{\partial x} \dot{x} \right) = 0$

Generalizado este resultado a 310-l versables y a f - 2, terrores que

 $\frac{d}{dt} \left(\frac{2}{2} \frac{\partial L}{\partial \dot{q}_{i}} \ddot{q}_{i} - \frac{1}{2} \left(\frac{1}{2}, \frac{1}{2}, \frac{1}{2}, \frac{1}{2} \right) = 0$
